

THE GENE VISION RANGE OF VISUALISERS FEATURES MODELS WITH STUNNING-QUALITY HIGH DEFINITION CAMERAS.

GENEE **vision**[®] ELITE II

Designed to work perfectly with our G-Touch range of interactive touchscreens, our Genee Vision visualisers enable presenters to display objects on an interactive screen, whiteboard or computer to large audiences during live presentations.

Visualisers can capture still images and video and, when combined with software such as Genee Toolbar and Genee Spark, enable you to annotate, highlight and draw over the objects and save your annotation as an image or video file.

Key features and benefits

A visualiser is an extremely flexible teaching and presentation tool, allowing presenters, teachers or students to display objects onto an interactive whiteboard, computer or LED touch screen. This means 3D objects, books, worksheets, maps and text can be viewed by a large audience without the need to be copied and distributed.

Genee visualisers use a high-quality CCD or CMOS camera mounted to either an arm or gooseneck. With a powerful zoom, focus and 720P or 1080P HD ready (depending on model) visualisers can be used to capture still images or video.

Features such as mirror, rotate, split screen, black and white, positive / negative, image freeze and title grab allow you to manipulate objects or text live on screen without affecting the original source. When combined with software such as the Genee Toolbar or Genee Spark you can also annotate, highlight, draw and write over the objects then save your work as an image or video file.
